COMMENT ON CURRENT TRENDS	25
MORBIDITY AND HOSPITALIZATION DATA FOR INDIVIDUAL STATIONS	28

WEEKLY HEALTH REPORT

NATURE OF THE DATA

The data presented here are taken from the Statistical Health Reports, WD AGO 8-122, rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States. Troops in transit and certain small detachments are not required to submit reports; for this and other reasons, total strength of reporting units has been consistently about 1 percent below the actual strength of the Army in this country. The mean strength shown for individual stations is that of Army personnel attached or assigned for medical care and does not include organizations not on the post but dependent on the station for hospitalization.

Because of the desirability of placing the information in circulation at the earliest possible time following its receipt, figures are in general shown herein as reported. Where there is some doubt as to the accuracy of the reported figures, their verification is requested, and the fact that they have been so questioned is indicated by the symbol (!).

MORBIDITY DATA

Admissions are reported only for cases admitted to a medical installation (either to hospital or quarters) and not returned to duty within the same day, except for certain cases carded for record only (chiefly venereal disease cases treated on a duty status, and deaths which occurred before admission to hospital or quarters). Admissions designated as "injury" comprise all "new" traumatisms (i.e., morbid conditions due to external causes, including poisons taken internally, results of exposure to heat, cold and light, as well as various types of wounds not due to enemy action) other than battle casualties. Under present conditions there would not be any direct admissions in the continental United States properly classifiable as battle casualties. All cases other than those of injury or battle casualty are classified as "disease."

Admission rates are shown for all causes combined, for all diseases combined, for injuries and for a few specific diseases. These rates are presented on an annual basis to facilitate comparisons with corresponding rates in annual and monthly reports. Such annual rates of admission indicate the number of admissions per thousand mean strength which would occur over a year's time if the current week's experience continued for a year.

The report also shows the number of cases of the more common communicable and certain other diseases of special interest. It may be noted that under the term infectious hepatitis are included cases reported as jaundice and cholangitis. Appended is a list of cases reported for the rarer communicable and certain other diseases.

The average proportion of the daily strength of the command which is confined to hospital or quarters (mean number of non-effectives per thousand strength) is given in the summary table for the total United States and for each of the Service Commands. More significant is the estimated non-effective rate for personnel stationed in the United States shown in the chart on page 7.

The number of enlisted men discharged during the week on Certificates of Disability for Discharge (CDD) are shown for individual stations. These data should be distinguished from the figures for "honorable discharges for physical and mental disqualification" assembled by The Adjutant General's Office; the latter include discharges for inaptness in addition to CDD's and are tabulated on a somewhat different basis (e.g., the April data represent April discharges processed by the AGO during April and May plus discharges prior to April which were processed in May).

In making comparisons between Service Commands it should be borne in mind that morbidity rates naturally tend to be higher in those Service Commands which have a relatively large number of General Hospitals and Ports of Embarkation. The presence of sizeable numbers of troops not under the jurisdiction of a Service Command (e.g. casualties, task force troops, etc.) affects the interpretation of the data from the viewpoint of Command responsibility.

MORTALITY DATA

Recent studies indicate that the reporting of deaths on WD AGO 8-122 is incomplete, especially in the case of deaths from injury. The resulting understatement in the mortality rate from injury may be as much as 10 percent and occasionally even more, but the death rate from disease is not materially understated. Therefore in computing mortality rates from injury and from all causes on the basis of the corresponding numbers of deaths, as shown in this report, an appropriate adjustment for the underreporting of such deaths must be made.

STATIONS WITH HIGHEST MORBIDITY RATES

Included in the report is a table listing the stations (having strength of 5000 or over) with the highest morbidity rates from all causes, from all diseases combined, from injuries, and from a few specific diseases. Not infrequently, the excessively high rates of admission for all causes and for all diseases combined reported from reception centers reflect a large number of venereal disease cases among newly inducted men. Therefore, more significant of high morbidity from disease are the rates of admission for disease excluding venereal infections existing prior to induction, which rates are also shown in the table. It should also be noted that reception, redistribution, and separation centers frequently report relatively large numbers of admissions arising from routine physical examinations of large bodies of troops.

EXPLANATORY MATTER

In reading the detail tables, it should be born in mind that admission rates based on small numbers of cases are not reliable. For this reason the symbol (?) is placed after admission rates computed on the basis of 5 or fewer cases.

Where the current week's data for a particular station have not been received, the latest available figures are substituted therefor and the symbol (x) is placed after the name of the station.

COMMENT ON CURRENT TRENDS

MORBIDITY FROM: ALL CAUSES, DISEASE, INJURY

Morbidity from all causes during the week ended 9 November increased by 5 percent as compared with the previous week, being reported at 499 per thousand strength per year.

INJURY:

The admission rate from injury increased to 32 per thousand from the rate of 31 reported last week. Weekly variations in the admission rate for injuries are shown in the chart on the opposite page; it should be noted that the decline in the rate during the last three months of 1944 is due to a re-definition of "injury" published in September of that year ("Non-battle injury" admissions were therein defined as excluding "readmissions"). The sharp decline since V-E day has been due more to the rapid discontinuing of "dangerous" training activities than to any other factors.

The Fifth Service Command reported the highest rate for injuries (41 per thousand), followed by the Third and Ninth Service Commands (37 and 38 per thousand, respectively).

DISEASES:

Morbidity from all diseases in the United States as a whole increased (by 5 percent) to 467 per thousand (5 percent under the rate for the corresponding week of last year).

Disease admission rates increased in all Service Commands except the First and the Military District of Washington. Largest increase relative to the preceding week (12%) was reported by the Sixth Service Command, while increases of about 10% were noted in the Second and Fourth Service Commands. Rates ranged from 436 and 437 per thousand in the Eighth and Ninth Service Commands to 550 and 558 per thousand in the Military District of Washington and the Third Service Command.

Respiratory Diseases:

The rate for colds, influenza, etc., increased by 6 percent in the United States as a whole during the week, reaching 87 per thousand, as compared with last year's corresponding rate of 91.

The rate decreased or remained unchanged in the Second, Fifth, Eighth, and Ninth Service Commands, while increases of 10% or more occurred in other Service Commands and the Military District of Washington. Highest rates were reported from the Third (103 per thousand) and Seventh (114 per thousand) Service Commands, and the Military District of Washington (149 per thousand).

The admission rate for pneumonia dropped from 10 to 9 per thousand during the week, with increases reported in the Second Service Command (12 to 14 per thousand) and the Third Service Command (8 to 12 per thousand). Of 478 cases of pneumonia reported during the week, 337, or 70%, were classified "atypical" pneumonia.

VENEREAL DISEASE ADMISSIONS (EXCLUDING EPTS CASES AND READMISSIONS)

ANNUAL RATES PER THOUSAND TROOPS

COMMENT ON CURRENT TRENDS (CONT'D)

Venereal Diseases:

Morbidity from venereal diseases (excluding EPTS cases) increased by 14 percent during the week to reach 66 per thousand per annum. This reflects in part the normal cyclical trend during the month, since the lowest rate usually occurs during the first week, followed by a rise thereafter until the end of month. The chart on page 8, which shows weekly variations in the venereal disease rate, illustrates this cycle.

Morbidity from these causes was highest in the Fourth Service Command, where the rate increased over 30% during the week to reach 97 per thousand. A decrease was noted in the Military District of Washington (to 23 per thousand, from the unusually high rate of 38 per thousand in the week before) as well as in the First, Third, and Seventh Service Commands.

Other Communicable Diseases:

Morbidity from diarrhea and dysentery remained low (4 per thousand); no service command reported a rate in excess of 5 per thousand.

NON-EFFECTIVE RATE:

The non-effective rate for personnel stationed in the continental United States is estimated at 29.5 per thousand strength for the week ended 9 November as compared with 33.5 per thousand for the corresponding week of 1944. The mean number of non-effectives in this country, including evacuees from overseas, increased to 76.4 per thousand troops in the United States. This increase in the rate is due in large measure to decreases in the strength of the Army in the continental United States.

PATIENTS REMAINING UNDER TREATMENT: 9 NOVEMBER 1945:

The number of neuropsychiatric cases remaining was 17,139 or about 700 fewer than at the end of the previous week. Non-battle injury patients remaining numbered about 34,800. The number of battle casualty patients remaining decreased by about 3000 to number 58,250.

CERTIFICATES OF DISABILITY FOR DISCHARGE:

In the week ended 9 November there were 8,879 enlisted personnel discharged by CDD, a decrease of about 1200 as compared with the previous week. Fifty-five percent of these discharges were reported by general hospitals and 27 percent by convalescent hospitals. Among these CDD's were 1689 neuropsychiatric cases, a decrease of about 600 as compared with the previous week.

WOMENS ARMY CORPS

During October special WAC reports were received from 50 selected stations which included most of the stations in the United States having a WAC strength of over 300. The WAC strength of 50 reporting stations was 35 percent of the total WAC strength in the continental United States.

During the four-week period ended 26 October the annual admission rate from all causes among WAC personnel at 50 selected stations increased (by 7 percent) to 821 per year per thousand strength. The October admission rate from all causes for the WAC was 72 percent above that for the total Army in the continental United States, reflecting the well-known fact that morbidity among women is considerably higher than among men.

Morbidity from all causes during October varied appreciably by station, reflecting in large part the relatively small numbers of personnel at most of the reporting installations. The all causes admission rates in general ranged from 500 to 2000 per thousand. Fort Myer, Va., Fort Bragg, N. C. were the only stations which reported rates in excess of 2400 per thousand (2509 per thousand, and 2436 per thousand respectively).

The October admission rate from injuries for the WAC increased to 30 per thousand as compared with 31 per thousand for the total Army in the United States.

Morbidity from colds, influenza, etc., increased from 126 per thousand in September to 186 per thousand in October which was over twice as high as the corresponding rate for the Army as a whole.

Morbidity from all forms of pneumonia was reported at 15 per thousand in October, about 67 percent higher than for the Army as a whole.

Morbidity from diarrhea and dysentery for the WAC was reported at 6 per thousand, which is about 20 percent higher than the October rate for the total Army.

In October neuropsychiatric disorders among the WAC accounted for an admission rate of 12 per thousand, a decrease of about 45 percent from the previous month.

The number of CDD's at the 50 selected WAC stations averaged about 17 per week during October as compared with a weekly average of about 18 during the six-month period of March through September.

WOMENS ARMY CORPS (CONT'D)

As of 26 October there were 622 WAC patients remaining in hospital and quarters at the 50 selected stations. In addition to the 584 WAC's remaining in hospital at the selected stations there were 1129 WAC's occupying beds in General Hospitals (exclusive of Tilton, Pickett, and Walter Reed, which are among the selected stations). The number of WAC's occupying beds at Station, Regional, and Convalescent Hospitals, exclusive of the 50 selected stations, was 655. Thus, the total number of WAC's occupying hospital beds as of the end of October was 2368.

The number of WAC's occupying hospital beds as of the end of October represented a rate of 35 per thousand strength of the WAC in the continental United States. For the total Army in the continental United States the corresponding figure was in the neighborhood of 28 per thousand when evacuees from overseas were excluded.
